TK MIS300A	3" Full Port Manifold Inductor System.....

CHEM-BLADE Chemical Jug Rinse System

Chem-Blade is a retrofit jug-splitting stainless knife system which opens chemical containers with speed and efficiency. Instead of operators using hand knives to remove caps and foil seals off containers, they simply bring the bottom of the jug down onto the blades splitting and emptying a 2.5 gallon

jug in mere seconds. With water supplying the built in high pressure rotary rinse head, the containers are thoroughly rinsed leaving no chemical in the container, saving money as well as time. Testing showed an operator can spray 25 to 45 more acres per day with the time savings created by **Chem-Blade**. So, recouping the purchase investment is possible in just weeks depending on jug usage.

Chem-Blade also empties bags of dry material fast with minimal effort. Designed to fit into any tank with a 16" lid diameter.
