

NH₃ Liquifier Systems

Leave corrosion and hours of seasonal maintenance behind with **The Liquifier's stainless steel construction** - naturally rust-resistant, tough, N-Serve® compatible and ready for all field conditions. The cooler, flowmeter, control valve and shut-off valve are all stainless steel (*inlet strainer is ductile iron and includes a cleanout port and magnet*). Steel mounting brackets are also included.

This rugged construction is combined with outstanding efficiency and industry leading flow capacity. These two valve systems also provide superior accuracy. *No assembly required* - right out of the box it is complete, leak-tested and ready to bolt onto your tool bar. Versatile and adaptable, it easily connects to all major brand controllers with the Direct Connect Kits shown below.
