

Waterproof LED Tube Lighting from Premier creates an eye-popping focal point for your facilities. An excellent way to brighten your bays while lowering your electricity costs. Built to perform in the harshest conditions. Can be used indoor or outdoor. Ideal for tunnel, self-serve or automatic bays.

Unique bendable design if needed, (*vacuum or tunnel arches*). This lighting is also a great choice for improving brightness in warehouses or industrial buildings.

Options are Bright white light for bays or Colored lighting with changeable options for tunnels or automatic bays. 60-70% Energy savings vs. standard lighting. Rebates available in many cities and states.

Available in 4', 6' and 8' lengths • Male and female plugs allow multiple tubes to be "daisy chained" together for long runs • Rated from 110-277 volt with built-in drivers • Stainless steel mounting hardware • IP67 rated • 8' Jumper cables available for attaching different run sections together • 5 Year warranty • Engineered drawings available if required.

Colored tubes can be easily programed on site for a specific color, (*nearly any color in the spectrum*) or with the optional LED hub and management app, color changes can occur based on time of day, weather or any reason for change. App can work with multiple locations. Compatible with phones, tablets or computers. **Note:** Tubes can be programed for a "specific color or color changing", but not both.

For ideal lighting, a typical self-serve or automatic bay would require approximately 28,000 lumens in any configuration • Typical 90' tunnel bay would require about 65,000 lumens • Typical 120' tunnel bay would require about 86,000 lumens.

Part No.	Color	Length	Watts	Lumens
